

MORE PRODUCTIVE

JS4552 Jaw Crusher Launched at ConExpo/ConAgg

Terex® Minerals Processing Systems launched its new Terex® Cedarapids JS4552 Jaw Crusher at ConExpo/ConAgg in Las Vegas and attracted much interest from show attendees. The new JS4552 Jaw Crusher features durable construction and an aggressive crushing motion for high productivity.

The rugged JS4552 is easy to operate and maintain and offers new levels of reliability and convenience. The jaw die retention system and hydraulic assist shim system allow more uptime, increasing productivity. The simple yet rugged hydraulic assist shim system allows jaw setting adjustments to be made fast and easy without the use of tools.

The jaw die wedges are highly accessible from the sides of the crusher and are easily removed. A simple procedure allows the jaw dies to be quickly changed, reducing maintenance time. The heavy-duty, deep rib jaw dies add to the aggressive crushing capability of the jaw.

TEREX®

WORKS FOR YOU.™
