

Viewing a UPK Training Simulation

Training simulations, also known as UPKs, offer Terex Dealers the ability to practice their TMS skills in a simulated system environment using several different playback modes.

1. **See It!** Mode enables a user to learn by watching an animated demonstration of the steps for a task being performed in a simulated environment. All of the required activities, such as moving the mouse and entering data, are completed automatically.
2. **Try It!** Mode enables a user to learn interactively in a simulated environment. The user is prompted for mouse clicks and/or keystrokes to complete the task. (playback mode recommended by Terex Education and Training)
3. **Know It?** Mode is an assessment-type playback mode in which users are instructed to complete a particular task. Users do not receive step-by-step instructions for completing a task. Instead, they complete the steps on their own in a simulated environment, and they are scored on how accurately they complete them.

How to Review a Training Simulation

Click the “Begin the course” to open the training simulation. After the simulation has loaded, expand the menu tree on the left side of the screen to locate a topic to review. Once a topic has been located, select the desired playback mode (**See It!**, **Try It!**, **Know It?**) from the top-right portion of the window. The simulation for the selected topic will begin. Follow the on-screen instructions to complete the simulation. Repeat this process, as necessary to review additional course topics, or the same course topic in a different mode.

After reviewing the training simulation, please feel free to download the associated Course Manuals and Job Aids available for the course for future reference from the links provided within the course description.
